Proposal of: **Online Clothing Store**

Professor: **Mahdi Molaei**

1. Team Name & Members
    - **Mahdi Babaei**
    - **Hosein Sendani**

2. Project Vision

This project aims to develop a full-stack online clothing store using Next.js, PostgreSQL, and React-based components. The system allows customers to browse products, manage their shopping carts, place orders, and access their accounts. It also provides an administrative interface for managing products, inventory, orders, and customers.

The project will follow a structured software development lifecycle, including requirements analysis, system design, implementation, testing, and deployment.

3. Target Audience

- Customers who want to browse and buy clothing online.
- Manager who manages products, inventory, blogs, clients, and customer orders. Also analysis the site profit.

4. Core Features — User Stories

1. As a customer, I want to create an account so that I can access personalized features such as order and manage them in dashboard.
